

MALONE CAMPBELL ROAD FACILITY, TEXAS CITY, GALVESTON COUNTY, TEXAS

Week ending 09/27/2015

On July 6, 2015 FOSC Zehner initiated an emergency pump down of contaminated storm at the facility which was authorized by the R6 Superfund Division Director. The initiation of emergency actions were necessary to abate the imminent and substantial threat of discharge of several hundred thousand gallons of contaminated storm water located on the Site from several multi-inch rainfalls associated with Tropical Storm Bill and other sub-tropical weather fronts that had impacted the Site. On-site disposal well WDW-138 began operations on July 6, 2015. The FOSC also authorized the operation of the additional on-site injection well WDW-73. Past rains have increased contact (contaminated) stormwater to approximately 3 million gallons in API separators and impoundments; 2.5 inches of rain occurred during this reporting period. Both injection wells (WDW-138 and WDW-73) are operational, with one operating for 3-days on a 24 hour basis for this reporting period. Both wells received a total of 720,791 gallons of injectate from September 21 through September 27, for a total injected since emergency response began of 3,922,101 gallons.
